

## **JUSTMEASURE OPENS WITH A NEW TYPE OF SOFTWARE FOR PC-BASED SENSOR MEASUREMENTS.**

*Test and measurement experts can now reduce their set-up and eliminate development time for their applications with easy-to-use sensor measurement software. Just Measure provides a suite of desktop and laptop-based measurement software for applications including vibration, acoustics, acceleration, pressure, and temperature. Design consulting for custom applications is also available.*

Austin, TX – December 4, 2007 – Test engineers and scientists can now take advantage of turnkey PC-based sensor measurement software for their most common applications for vibration, acoustics, acceleration, pressure, and temperature, starting at only \$400. Users can also submit their own idea for custom applications or take advantage of revenue sharing on programs they develop.

JustMeasure's unique programming vision eliminates programming and development time by combining industry leading National Instruments data acquisition hardware with individually designed innovative software. This combination provides users with a simple-to-use solution for scientists, engineers, and technicians to measure vibration (accelerometers), acoustics (microphones), acceleration (accelerometers), pressure (dynamic pressure sensors), and temperature (thermocouples) with a desktop or laptop PC.

"We realized there is no need to purchase expensive sophisticated instrumentation with hard to use software when the power inside the typical PC can accomplish the same measurement results", says William England, Sales Manager for JustMeasure. "This is why JustMeasure chose to develop software based on National Instruments Measurement Hardware and the LabVIEW programming language. The result: software with the accuracy and robustness that rival the most expensive instruments money can buy."

Users can download applications or submit their own applications online at [www.justmeasure.net](http://www.justmeasure.net) or by calling 877.454.DATA (3282)

About JustMeasure:

JustMeasure is the leading provider of sensor based measurement software for data acquisition. We empower test engineers and scientists to save thousands of dollars and weeks of development time for their applications in vibration, acoustics, acceleration, pressure, and temperature. Services and products include easy-to-use downloadable programs or custom development for test and measurement applications.
